# DEVON GREATER HORSESHOE BAT PROJECT

A collection of stunning photographs showing images of Greater Horseshoe bats, their predators and prey

## DEVON'S NOCTURNAL WONDER

As darkness falls, Devon's large night-time predator sets out to feed. Dozens and even hundreds leave their roosts following hedges, through the fields, looking for prey. But they need your help...

## PROJECT GOALS

Working across Devon, the project is looking to secure the future of this species in the county. Ensuring the habitats needed are present, that our bat knowledge is better and that the people of Devon know about the species and so are better able to look after it.

WORKING WITH LANDOWNERS - from ensuring roosts are looked after to helping farmers manage parasitic worms, from recreating flower-rich grasslands and hedges to financial support for long-term management.

BRINGING BATS TO PEOPLE - helping Devon's communities to learn about their night time neighbour, and offer opportunities to celebrate and support the bats; from classroom activities to sowing a wildflower meadow, surveying to building a roost.

IMPROVING OUR KNOWLEDGE - citizen science surveys will give local communities and individuals the opportunity to increase our understanding of how the greater horseshoe uses the landscapes. Why not get involved and borrow a Bat Detector as part of our Devon Bat Survey.
